Day 3 – Auth Working, Figma v1

You (done already)

- Integrate Supabase client into Next.js (shared `supabaseClient` / server helpers).
- Review / refine auth flow (where we redirect after login, required profile fields).

Santhosh (done my me, you should check the functionality of this today)

- Implement backend pieces for:
  - `profiles` table and link to auth user.
  - API route or server action to update profile (name, phone, college/company).

Debojeet

- Hook up login/signup forms to Supabase auth.
- After login, redirect to `/dashboard`.
- Show simple "Welcome, {name}" in dashboard.

Smriti (all tasks pending, day 1-3 – completed them all today)

- Turn wireframes into **Figma v1** with basic design system (colors, fonts, buttons).
- Share components with you + Debojeet for implementation.

Harshita

- Confirm everyone can run the app locally.
- Check if anyone is stuck on env or tooling and bring it to me quickly.

Nikhil

- Async: review Figma v1 when Smriti shares, give fast feedback.
