Day 4 – Teams: Data & Basic UI

Me (done)

- Finalize team FSM details and write short doc: one team per user, `team_owner_id`, `max_members`.
- Define simple API contract for “create team” and “join team by code”.

Santhosh (done by me, he will be replaced by Nikhil today, due to lack of communication and contribution)

- Implement DB constraints:
  - One active team per user.
  - `team_owner_id`, `max_members`.
- Implement backend handlers: create team, generate invite code, join via code.

Debojeet

- On `/dashboard`, add:
  - “Participate Solo” and “Create/Join Team” UI.
  - Forms wired to the backend APIs (or placeholders if APIs land end of day).

Smriti

- Refine team-related dashboard UI in Figma (cards, forms, empty states).

Harshita

- Check progress on teams: can everyone explain how team creation/joining will work?
- Note any UX issues from ops perspective and share with Me + Smriti.
